Chapter 7

Method of Laplace Transforms for Solving DE's

Chapter Goals

- Given a DE, Perform a Calculus-based rule for finding the laplace transformation of DE.
- Solve this new equation algebraically.
- Find the inverse-Laplace transformation to get our solution to the IVP.

7.1 Definition of Laplace Transform

Given a function f(t), the Laplace Transform of f(t) is

$$\mathscr{L}\{f(t)\} = \int_0^\infty e^{-st} f(t) dt$$

7.1.1 – Laplace Transformations of basic Functions

(1)

$$\mathcal{L}{1} = \int_0^\infty e^{-st} (1) dt$$

$$= \int_0^\infty e^{-st} dt$$

$$= \lim_{b \to \infty} \int_0^b e^{-st} dt$$

$$= \lim_{b \to \infty} \frac{e^{-st}}{-s} \Big|_0^b$$

$$= \lim_{b \to \infty} \frac{e^{-s(b)}}{-s} - \frac{e^{-s(0)}}{-s}$$

$$= -\frac{e^{-s(0)}}{-s} + \lim_{b \to \infty} \frac{e^{-s(b)}}{-s}$$

$$= -\frac{e^0}{-s} + \frac{1}{-s} \lim_{b \to \infty} e^{-s} e^b$$

$$= \frac{1}{s} - \frac{e^{-s}}{s} \lim_{b \to \infty} e^b$$

$$= \frac{1}{s} \text{ for } s > 0$$

(2)

$$\mathcal{L}{k} = \int_0^\infty e^{-st} k dt$$
$$= k \int_0^\infty e^{-st} dt$$
$$= k \frac{1}{s}$$
$$= \frac{k}{s}$$

The Laplace Transform is a *linear operator*, in other words,

$$\mathcal{L}\lbrace f(t) + q(t)\rbrace = \mathcal{L}\lbrace f(t)\rbrace + \mathcal{L}\lbrace q(t)\rbrace$$

$$\mathcal{L}\{kf(t)\} = k\mathcal{L}\{f(t)\}$$

(5)
$$\mathcal{L}\{e^{2t}\} = \int_0^\infty e^{-st} \times e^{2t} dt$$

$$= \int_0^\infty e^{(2-s)t} dt$$

$$= \int_0^\infty e^{-(s-2)t} dt$$

$$u = -(s-2)t$$

$$du = -(s-2)dt$$

$$= \int_0^\infty e^u \frac{du}{-(s-2)}$$

$$= \frac{1}{-(s-2)} \int_0^\infty e^u du$$

$$= \frac{1}{-(s-2)} e^u \Big|_0^\infty$$

$$= \lim_{b \to \infty} \frac{1}{-(s-2)} e^{-(s-2)t} \Big|_0^\infty$$

$$= \lim_{b \to \infty} \frac{1}{-(s-2)} e^{-(s-2)t} - \frac{1}{-(s-2)} e^{-(s-2)0}$$

$$= -\frac{1}{-(s-2)} e^0 + \lim_{b \to \infty} \frac{1}{-(s-2)} e^{-(s-2)b}$$

$$= -\frac{1}{-(s-2)} (1)$$

$$= \frac{1}{s-2}$$

$$\mathcal{L}\{e^{at}\} = \frac{1}{s-a} \text{ for } s > a$$

(6)
$$\mathscr{L}\{t^n\} = \frac{n!}{s^{n+1}}$$

(7)
$$\mathcal{L}\{\cos(kt)\} = \frac{s}{s^2 + k^2}$$

(8)
$$\mathcal{L}\{\sin(kt)\} = \frac{k}{s^2 + k^2}$$
